

Dr. Istanbul's Email Agent

A No-Code AI System That Writes & Sends Professional Emails Automatically

Challenge 2

1. Introduction – Why This System?

Problem: Professionals waste hours every week writing the same types of emails—follow-ups, meeting requests, client updates.

Solution: A smart AI assistant that:

- Turns short chat commands into polished emails

- Automatically saves drafts (or sends them) in Gmail

- Works in **under 10 seconds** with **zero manual editing**

Perfect for: Busy professionals, customer support teams, or anyone who sends repetitive emails.

2. How It Works – The Simple Logic

Think of this system like a **smart email secretary**. You give it a simple instruction, and it handles everything else.

Step-by-Step Flow (The Magic Behind It)

1. **You Type a Request** (Example: "Email Dr. Smith to reschedule our meeting")

2. **AI Understands & Drafts** (Using a structured prompt)

3. **System Saves as Gmail Draft** (No copy-pasting!)

4. **You Get a Confirmation** ("Draft created!")

3. The Secret Sauce – The Dynamic Prompt

The **real power** of this system is in the **AI prompt design**. Let's break it down like a recipe:

The Prompt Structure (Why It Works So Well)

```
json
{
  "model": "llama3-8b-8192",
  "messages": [{
    "role": "user",
    "content": "As {{sender_name}} from {{company}}, create professional email for: {{user_input}}. Respond ONLY with: {\"to\": \"\", \"subject\": \"\", \"body\": \"\"}"
  }],
  "temperature": 0.3
}
```

Why This Prompt is Genius

Dynamic Variables ({{ }}) → Personalizes every email automatically

- **{{sender_name}}** → Inserts **your name**
- **{{company}}** → Adds **your company** for branding
- **{{user_input}}** → Uses **your exact request**

Forced JSON Output → Ensures clean, structured data

- The AI **must** reply in this format:

```
json
{"to": "email@example.com", "subject": "...", "body": "..."}

```

- This makes it **easy for automation tools (like n8n)** to process.

Temperature = 0.3 → Keeps emails professional but not robotic

- Lower (0.1) = More formal
 - Higher (0.5) = More creative
-

4. Key Benefits – Why This Beats Manual Emailing

Saves 5-15 minutes per email (No more staring at a blank screen!)

Always on-brand (Consistent tone & formatting)

No training needed (Just type naturally)

Easy to modify (Change prompts for different email types)

5. How This Meets the Challenge Requirements

Requirement	How I Deliver
Complete Task	Full automation from chat → draft
Realistic Use	Works for real business emails
Clear Logic	Annotated prompt + workflow
Teaching Value	Explains dynamic prompts & JSON structuring

6. Try It Yourself!

Want to build this? Just:

1. **Copy the prompt** above

2. **Connect n8n to Gmail** (or another automation tool)

3. **Test with simple requests** ("Email a client about invoice delay")

Pro Tip: Adjust **temperature** for different email tones!

7. Final Thoughts

This system proves that **AI + smart prompts** can turn tedious tasks into **one-click automations**.

The key?

- Structured prompts** → Reliable outputs
- Dynamic variables** → Personalization
- Forced JSON** → Easy processing

Now go save yourself hours of email writing!
